

Fusion Protect

Rethink Backup & Archive

Restoring lost or corrupted files is crucial for surviving in today's information driven business world. With iVision **Fusion Protect**, we can change the way you achieve reliable data-protection for your most mission-critical data and information.

Focus On Your Business

Whether it's deleted files, a corrupted database, or mandated regulatory compliances: the pressure to backup, protect and archive mission-critical data is becoming more and more complex and difficult to maintain.

Even with traditional on-premise backup solutions, it takes time and focus away from what you do best as a company, often creating less-than-expected results and still leaving your business exposed to risk.

Unified Protection. Reliable Results.

iVision **Fusion Protect** offers a comprehensive and holistic data-protection platform delivered as a fully managed hybrid cloud service. It provides a unified method in which to backup, archive, & restore data stored across your organization within applications, databases, servers, remote offices and even mobile devices. And with iVision's 24x7 Global Support Team managing and monitoring the health, status and reliability of your backups - we keep the lights on while you stay focused on running your business.

On-Demand Hybrid Delivery

Built as a hybrid cloud service platform leveraging the industry's leading cloud-enabled technologies, iVision **Fusion Protect** provides the integration and convenience of local on-premise backups & restores combined with encrypted secured cloud-based storage for all offsite archive & retention needs.

The end result is a centralized view into managing the life-cycle of protecting and retaining your mission-critical data regardless of where it's stored across private, public or hybrid cloud infrastructures.

Eliminate the CAPEX burden & complexity of on-premise backup solutions.

Lower risk. Peace of mind.

Fully managed data-protection delivering comprehensive backup, archive and restoration of your mission-critical data.

Core Service Features Include:

- » Consumption based usage model through fully-managed hybrid cloud backup & archiving
- » File or image-level backup & restore for physical/virtual servers, desktops & mobile devices
