

Fusion Recovery

Rethink Disaster Recovery

Preventing disruption is vital in today's fast paced business world. With iVision **Fusion Recovery**, we can change the way you achieve true disaster recovery for your most mission-critical services and applications.

Focus On Your Business

Today's companies rely more and more on technology and data to maintain a competitive edge. Disruption in operations and access to data can result in immeasurable damage to your clients and your reputation.

Even with traditional on-prem DR solutions, it takes time and focus away from what you do best as an organization, often creating less-than-expected results and still leaving your business exposed to risk.

Real Recovery. Real Results.

iVision **Fusion Recovery** helps eliminate risk through a fully-managed DR-as-a-Service offering that provides immediate access to enterprise-class cloud resources for protection of your primary services & applications. It allows your team to stay focused on what you do best while leveraging our expertise in infrastructure, data replication, risk mitigation and managing the fail-over process for you.

Capacity On-Demand

Built on the industry's leading cloud-enabled technologies, iVision **Fusion Recovery** offers an elastic capacity on-demand consumption model that allows you to consume only what you need, when you need it. With virtualization leveraged at every layer, you are provided maximum compatibility and transparency when moving workloads over to our secure facilities for testing...or in the event of a real disaster.

**30-50% less
than traditional
on-prem solutions.**

Lower risk. Peace of mind.

Fully-managed on-demand enterprise-class cloud resources reserved and ready for when you need them most.

Core Service Features Include:

- » Consumption based usage model providing cost-effective access to enterprise-class compute, storage and network cloud resources
- » Support for virtual and physical servers
- » Flexible replication models supporting array or software-based technologies
- » Customizable RTO's with near-zero RPO's using journal-based CDP replication features
- » Virtualized L2-L7 services for seamless transition of core network services
- » Dedicated circuit or managed IPSEC-VPN connectivity options with integrated WAN acceleration
- » 24x7x365 comprehensive onboarding, support and recovery services managed by iVision SSAE-16, ITIL, and MSP/Cloud Verify certified Engineering & Support Services Team (ESS)
- » Secured and operated in Tier3 SSAE-16 SOC1/2 compliant US-based data centers

About iVision

iVision has over 10 years of expertise in building hybrid IT infrastructures and applications in partnership with its clients through objective recommendations, process and technology expertise, as well as best-of-breed guidance and reference architectures.
