

# iVision IT Resiliency

Protecting your business-critical operations starts with a comprehensive backup and disaster recovery strategy. Identify potential threats and implement a recovery plan with iVision's BaaS and DRaaS solutions. Achieve reliable data protection for your business-critical information and streamline the disaster recovery process for services and applications.

## iVision BaaS

### WHY BaaS?

Delegate data backup and protection to a Backup-as-a-Service (BaaS) partner like iVision to help you stay focused on business growth and innovation.

### UNIFIED PROTECTION. RELIABLE RESULTS.

iVision BaaS offers a comprehensive data-protection platform delivered as a fully managed hybrid cloud service. We backup, archive, and restore data stored across your organization within applications, databases, servers, remote offices, and mobile devices.

### DELIVERY ON DEMAND

iVision BaaS is a hybrid cloud service platform that combines the integration and convenience of local on-prem backup and restoration with encrypted, secured cloud-based storage for all archive and retention needs.

## iVision DRaaS

### WHY DRaaS?

Reduce failover time and disruptions in IT operations to help you stay focused on keeping your business operational.

### REAL RECOVERY. REAL RESULTS.

iVision DRaaS helps eliminate risk through a fully-managed DRaaS offering that provides immediate access to enterprise-class cloud resources for protection of your primary services and applications.

### CAPACITY ON DEMAND

iVision DRaaS is built on the industry's leading cloud-enabled technologies. It offers an elastic capacity on demand consumption model that allows you to consume only what you need, when you need it.

We offer multiple ways for you to leverage AWS or Azure for your backup and disaster recovery needs:

- If you maintain a primary data center on-premises but want to utilize the cloud for backup and recovery, we can replicate your environment up to Azure/AWS.

- If you have a public cloud infrastructure with Azure or AWS and you want to protect those assets, iVision BaaS and DRaaS can assist with that.

# BaaS

# DRaaS

Eliminate the CAPEX burden and complexity of on-prem backup solutions.

30-50% lower cost than traditional on-prem solutions.

## Core Service Features Include:

- Consumption-based usage model
- 24x7x365 comprehensive onboarding, support and restoration services managed by iVision's SSAE-18, SOC 2, and ITIL certified Engineering & Support Services Team (ESS)
- Secured & operated in a TierIII, ISO 27001, and ISO 9001 US-based data centers

- File or image-level backup and restoration for physical and virtual servers, desktops, and mobile devices
- Rich support for Windows, Linux, AIX, AS/400 and direct SAN/NAS integration
- Granular application-aware protection for Exchange, SQL, Oracle, SAP, Sharepoint, and more
- Hybrid cloud integration with support for AWS, Azure and Microsoft 365
- Optional E-Discovery, compliance and integrated AES 256-bit encryption

- Support for virtual and physical servers
- Compatible with AWS, Azure and Microsoft 365
- Flexible replication models supporting array or software-based technologies
- Customizable RTOs with near-zero RPOs using journal-based CDP replication features
- Virtualized L2-L7 services for seamless transition of core network services
- Dedicated circuit or managed IPSEC-VPN connectivity options with integrated WAN acceleration

## BETTER TOGETHER

iVision BaaS and DRaaS are just one part of a healthy Business Continuity Management System (BCMS). Let our certified ISO 22301 implementors help you start building your BCMS today!

## TECHNOLOGY PARTNERS
